

Lean Validation Plan for a Vinted-Style Marketplace in Argentina

This playbook shows how two developers can validate the need for a peer-to-peer second-hand clothing marketplace in Argentina—similar to Vinted—while spending minimal time and money. Each stage has a clear go/no-go metric so you only build what the market actually requests.

1 · Desk Research Sprint (1–2 days)

- Market size & growth – quantify Argentina’s online second-hand apparel segment and its expected double-digit growth.
- Competitor matrix – map players such as Renová Tu Vestidor, Mercado Libre Moda Circular, OLX and IG shops to uncover white space.
- Consumer sentiment – scrape press and social chatter to see which arguments convert (price vs. sustainability).

Exit criterion: you can name one underserved niche and one differentiator.

2 · Problem Interviews (3–5 days)

- Prepare 10 buyer + 10 seller questions around pain, frequency, and current workaround.
- Recruit interviewees in Facebook/WhatsApp groups (e.g., “Ropa Usada BA”).
- Score each interview 1–5 on problem severity.

Exit criterion: $\geq 8 / 20$ people rate the same pain ≥ 4 .

3 · Smoke Test Landing Page (5 days incl. ads)

- Launch a simple page (value prop, mockup, waitlist form).
- Add GA4 and Meta pixel event tracking.
- Spend €50–100 on IG/TikTok ads targeting AR, 18–34, “moda sustentable”.
- Key Metrics: CTR ad→LP > 2 %; Email conversion > 25 %; Cost per lead < €1.50

4 · Concierge MVP (“Wizard of Oz”) (1 week)

- Use Telegram or WhatsApp to manually match sellers and buyers.
- Collect listings with Google Forms and charge via Mercado Pago links.
- Generate prepaid Andreani/OCA labels yourself.
- Track all actions in a spreadsheet.

Success metric: at least 15 real transactions with NPS ≥ 8 .

5 · Build the Smallest Real Product (3–4 weeks)

- Core scope: list → buy → pay → ship → rate.
- Suggested stack: Next.js + Supabase, Mercado Pago escrow, Shipit/Moova SDK, Cloudinary CDN.
- Limit launch to CABA and one category to keep density high.

Early PMF KPIs: Listing to sale > 30 % in 30 days; Buyer repeat > 25 %; CAC : LTV < 1 : 4

6 · Iterate or Pivot

- Low seller activation → offer a “closet concierge” pickup service.
- Low trust → integrate RENAPER DNI selfie verification and clear buyer protection.
- Stagnant growth → expand into kidswear or accessories before new regions.

Argentina ■ Specific Watch ■ Outs

- Use Mercado Pago or dLocal for payments; Stripe isn't live in AR.
- Ley 24.240 grants a 10 day cooling off period for online sales — hold funds in escrow.
- Shipping a 500 g parcel CABA → Córdoba is ~ARS 3 000 — consider subsidies or pickup lockers.
- No ban on domestic resale of used textiles; 2024 resolution only eased import tagging rules.

TL;DR — Research → Interview → Smoke test → Concierge MVP → Minimal Product. Validate fast, build only what the market proves it wants.
