

Below is a lean, step-by-step game-plan to **validate whether Argentina really needs its own “Vinted”-style marketplace and, if so, how to test it quickly with just two developers.**

I keep each step small enough to finish in 1-2 weeks, with a clear success metric before you invest in the next one.

1 · Desk-research sprint (1–2 days)

What to collect	Why it matters
Market size & growth — Argentina’s second-hand apparel segment is forecast to keep double-digit annual growth through 2031, with online channels grabbing the fastest share. (6Wresearch)	Confirms a growing pie.
Competitor matrix — <i>Renová Tu Vestidor</i> (local, women-only) (renovatuvestidor.com), Mercado Libre’s “Moda Circular” category, OLX, Instagram shops, upcoming LatAm players such as GoTrendier (12 M users in MX/CO) eyeing new countries. (LinkedIn)	Reveals white space (e.g., unisex, better UX, integrated shipping).
Consumer sentiment — recent press shows “moda circular” is mainstream and sustainability-driven in BA. (infobae)	Tells you which value proposition resonates (price vs. eco-impact).

Exit-criterion: You can name *one* underserved niche (e.g., fast fashion for Gen-Z men, premium kidswear) and *one* differentiator (e.g., escrowed payment + prepaid shipping label).

2 · Problem interviews (3–5 days)

1. Draft 10 buyer + 10 seller questions focusing on **pain, frequency, and current workaround**.
2. Recruit interviewees in existing Facebook/WhatsApp groups like “Ropa Usada BA” or IG hashtags (#modacircularAR).
3. Score each interview **1-5** on problem severity.

Exit-criterion: ≥ 8 / 20 people rate the same pain ≥ 4 . If not, adjust your niche before moving on.

3 · Smoke-test landing page (5 days incl. ads)

You already built *modacircular's* pre-launch page — perfect. Polish it:

- 3-sentence value prop + 1 hero mockup + email wait-list.
- Social proof badges ("Construido por ex-developers de X").
- Pixel + event tracking (GA4, Meta).

Run **€50–100** of TikTok-/IG-ads targeting AR, 18-34, "moda sustentable".

Metric	Good sign
CTR ad → LP	> 2 %
Email conversions	> 25 % of visitors
Cost-per-lead	< €1.50

If the funnel is weak, tweak messaging before you code.

4 · Concierge MVP ("Wizard-of-Oz") (1 week)

- Create a private Telegram or WhatsApp channel where **you manually match sellers and buyers**, use Google Forms for listings, and Mercado Pago links for payments.
- Offer prepaid Andreani/OCA labels you generate yourself.
- Keep a spreadsheet of every step/time-taken.

Success metric: ≥ 15 live transactions with NPS ≥ 8 .

You've now validated **both supply & demand plus logistics** without a single micro-service.

5 · Build the smallest real product (3–4 weeks)

1. **Core features only:** list → buy → pay → ship → rate.
2. Stack suggestion for two devs:
 - **Next.js + Supabase** (Postgres + Auth + Storage)
 - **Mercado Pago escrow API** (split payments, KYC)
 - **Shipit/Moova SDK** for label generation
 - **Image CDN** (Cloudinary) to optimise photos

3. Scope to one city (CABA) and one category to keep density high.

Launch to the wait-list; measure:

KPI	Target to prove PMF
Listing-to-sale conversion	> 30 % within 30 days
Buyer repeat rate	> 25 % after first purchase
CAC : LTV	< 1 : 4 at small scale

6 · Iterate or pivot

- If seller activation is the bottleneck → add “closet concierge” (you pick up, photo, list).
- If trust is the bottleneck → integrate DNI selfie verification (RENAPER) and buyer protection messaging.
- If growth plateaus → open kidswear or accessories vertical first; only later expand geographically.

Practical tips & watch-outs (Argentina-specific)

- **Payments:** Stripe still isn't public in AR; build on Mercado Pago or dLocal to avoid foreign-exchange traps.
- **Returns & consumer law:** ley 24.240 grants a 10-day cooling-off period for online sales — escrow funds accordingly.
- **Sanitary/used-textile rules:** there's no outright ban on domestic resale; the 2024 resolution eased textile import tagging but local second-hand is unaffected. ([infobae](#))
- **Logistics cost shock:** shipping a 500 g parcel CABA → Córdoba is ~ARS 3 000; bake a shipping-subsidy cap into your model or encourage pick-up lockers.

TL;DR

1. **Research → Interview → Smoke-test** before a single schema-migration.
2. **Validate one niche in Buenos Aires** with a concierge MVP.

3. **Only code what proves out;** measure real seller/buyer behaviour and iterate.

Follow those gates and you'll know within ~8 weeks — and at minimal spend — whether Argentina is waiting for its own Vinted, or whether you should pivot to a narrower (or broader) opportunity instead.
